PROGRAMING FUNDAMENTAL

LAB ASSIGNMENT

LAB 1:FLOWCHART & PSEUDO CODETASK 1:

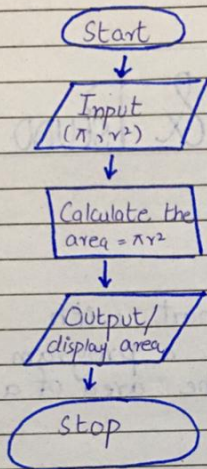

Make a flowchart with pseudo-code. Write a program that calculates the area of a circle.

$$\text{Area} = \pi r^2$$

Pseudo-code:

- Step 1 : Start
 - Step 2 : Input (π, r^2)
 - Step 3 : Calculate the area.
 - Step 4 : Output (area)
 - Step 5 : stop
-

Flowchart:

Task 2:

Creating flowchart and pseudo-code for program that calculates and displays the average of three numbers. The program should take three input from the user and then compute average.

The average of the three numbers using the formula:

$$\text{Average} = \frac{\text{Num 1} + \text{Num 2} + \text{Num 3}}{3}$$

Pseudo-code:

Step 1: Start

Step 2: Input (Num1, Num2, Num3)

Step 3: Calculate $\text{sum} = \text{Num1} + \text{Num2} + \text{Num3}$

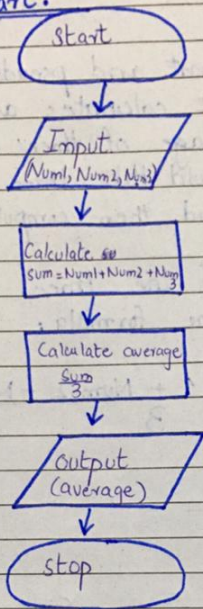

Step 4: Calculate $\text{average} = \text{sum} / 3$

Step 5: Output (average)

Step 6: Stop

Flowchart:

TASK 3:

Given the expression

$$x = y^2 - z/3$$

where, y , and z are equal to 5,
calculate the value of x .

Given data:

$$y = 5$$

$$z = 5$$

To find:

$$x = ?$$

Solution:

$$x = y^2 - z/3$$

$$= 5^2 - \frac{5}{3}$$

$$= 10 - 1.66$$

$$x = 8.34$$

Answer.

$$\begin{array}{r}
 1.66 \\
 3 \overline{) 5.00} \\
 \underline{-3} \\
 20 \\
 \underline{18} \\
 20 \\
 \underline{18}
 \end{array}$$

TASK 4:

Create an expression with a mix of addition, subtraction, multiplication, division, and modulus operators, AND operators, OR operator, and challenge students to simplify and calculate the final result.

Expression:

$$((12-3)^*4/2 + 5) \&\&(3<4 \parallel 7>=8)$$

Solution:

$$((12-3)^*4/2 + 5) \&\&(3<4 \parallel 7>=8)$$

$$((12-3)^*2 + 5) \&\&(3<4 \parallel 7>=8)$$

$$((12-3)^*$$

$$((9)^*2 + 5) \&\&(3<4 \parallel 7>=8)$$

$$(18+5) \&\&(3<4 \parallel 7>=8)$$

$$(23) \&\&(3<4 \parallel 7>=8)$$

$$\text{True} \&\&(\text{True} \parallel \text{False})$$

$$(\text{True}) \&\&(\text{True})$$

True

Answer

Expression.

$$(8*2)/4 + (10\%3) \parallel (6==6 \&\& 3>2)$$

Solution:

$$((8*2)/4 + (10\%3)) \parallel (6==6 \&\& 3>2)$$

$$((16/4 + 1)) \parallel (6==6 \&\& 3>2)$$

$$(4+1) \parallel (6==6 \&\& 3>2)$$

$$5 \parallel (6==6 \&\& 3>2)$$

$$5 \parallel (\text{True} \&\& \text{True})$$

$$5 \parallel (\text{True})$$

$$\text{True} \parallel \text{True}$$

True

Answer
